FOR IMMEDIATE RELEASE

EnBiorganic Expands Its Network, Now Delivering Innovative Treatment Services in New York

Spadefoot Water Treatment Services, LLC joins the EnBiorganic Technologies network of licensees to offer cutting edge wastewater and surface water treatment technology options

Las Vegas, NV May 2022– EnBiorganic Technologies, innovator and provider of patented turn-key autonomous systems for the natural, biological treatment of wastewater is pleased to welcome Spadefoot Water Treatment Services, a division of Spadefoot Design and Construction to its licensed network of EBS-Di Installers and service providers.

Spadefoot will be able to implement and deliver EnBiorganic's (TaaS) Treatment as a Service solution to wastewater utilities and surface water management entities throughout Long Island, NY. A leader in the fields of habitat restoration, stormwater management and natural infrastructure throughout the Long Island area, Spadefoot's leadership team are dedicated advocates for bioremediation and

sustainability. They understand that environmental issues in vital water bodies are often caused by upland sources such as wastewater, run-off and non-source point pollution. "We have enjoyed tremendous success utilizing nature to heal nature as opposed to man-made, engineered solutions. When we saw this technology, we knew it would be an answer to so many pressing issues. Here in New York, we face some enormous environmental challenges, from wastewater to algae blooms to contaminated drinking water to the collapse of whole habitats. We asked, what if the solution to a man-

made problem turned out to be Nature? What if soil bacteria could outcompete the disease-causing bacteria?" offered Marshall Brown, Partner at Spadefoot.

Added Spadefoot's Founder, Frank Piccininni, "We are excited to be able to bring this ground-breaking solution to the communities we serve and deliver the results it has been providing to other parts of North America."

"We are delighted to have a firm like Spadefoot join our ranks due to their commitment to healing the planet, and their visionary approach to sustainability," shares Darrell Liski, CEO of Enbiorganic Technologies. "We anticipate great positive changes in improving Long Island's wastewater and natural infrastructure using our technology thru this new partnership."
